Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5-11 and 15-19 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jaduszliwer et al. (USP 5,747,348).

Jaduszliwer et al. teach in column 1-2 lines 59-8 respectively detection of hypergolic rocket propellants (hydrazine and nitrogen tetroxide) using a paper tape that is impregnated with a colorimetric indicator for the propellants. When the predetermined threshold is reached alarms are triggered.

Allowable Subject Matter

Claims 2-4 and 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Election/Restrictions

Claim 20 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected II, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 9/12/07.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

"Assaying the Rayleigh Intensity Remote Leak Detection Technique" and "Advanced Development of Ground Instrumentation as a Key Strategy in Improving the Safety and Efficiency of Space Shuttle Checkout and Launch" has been cited to show the state of the art. These references fail to teach or suggest the use of the claimed mercurous chloride/methylcellulose reagent alone or in combination with the claimed N-phenylanthranilic acid/titanium dioxide reagent to detect hypergolic fuel leaks.
